Introduction

Project Summary

In today's busy schedule, we often tend to forget the most important things of our life, that is taking care of our health. When it comes to health, a big part of it is dealt by our medicines. Our app intends to make it easier for the users by handling a few of the most responsible thing regarding medicines. Anybody who would like to get relieved of the headache of remembering and counting medicines every alternate day should use this app.

Objectives

Med Plus is a Web application to assist people with their medical routine. It will store all the medications prescribed by the doctor and help maintain the stock till the time needed.

Background

To assist people in reminding them about medicines, tracking their current stock of the required medicines, getting the location of the nearest chemist shop and scheduling appointments at the nearest clinic.

Services Provided By the App:

- Maintain track of the stock of required medicines.

- Schedule reminders at appropriate times for prescribed medicines.

- List the nearest chemist shops' locations.

Project Scope

The **Med Plus** is a simple web app, and can help manage numerous people's medications. It also tracks your prescriptions and reminds you when it's time for a refill.

In Scope Functionality

- This reminder app are more likely to be useful , increase patient engagement and optimise effects.

Out of scope

- No availability of medicine stock details by users.

System Perspective

Constraints

- The chemist shops which are not registered on Google Maps and other online resources.
- No permission of receiving datas to unregisterd members.
